

## Oliver Quick Blade Changing Tool

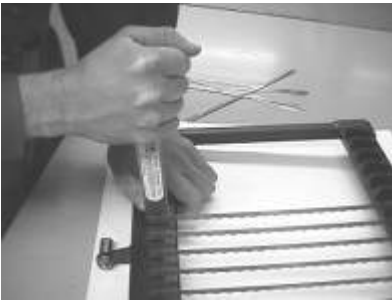

**CAUTION**  
**Blades are Very Sharp!**

Large Opening (for blade removal)

Small Opening (for blade installation)

Part No. 0797-0183-006

**Old Blade Removal**

1. Place the tool's large opening onto the blade tensing pin.
2. Relieve the tension of the blade by pushing on the other end of tool.
3. Snap all of the blades off this way.

**New Blade Installation**

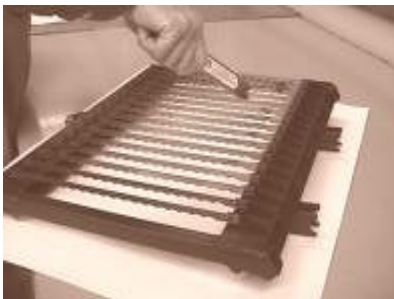

1. Place blade onto blade tensing pin only, making sure the sharp side of the blade is facing the same as the old blades.

2. Insert tool over the blade and blade tensioning pin. The tool will hold the blade on the blade tensioning pin.

3. Apply force forward on the tool, against the blade tensioning pin, until the other end of the blade lines up
4. Place other end of blade onto the stationary blade pin, making sure that it is flat against the pin.

#### **New Blade Installation Check**

1. After installation is complete, gently tap each blade on the non-sharpened side to insure that each blade is installed properly.
